

Can solar power improve Indonesia's energy security?

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity supply, and address the challenges of climate change.

What is Indonesia's solar energy capacity?

The capacity of solar energy in Indonesia is steadily climbing. With total capacity reaching over 322.6 MW as of the first half of 2023, this is an increase of over 800% in the last 10 years. This progress is part of Indonesia's solar energy plan, which targets 5 GW of installed capacity by 2030.

Can Indonesia harness solar energy?

While solar energy capacity is increasing in Indonesia, the current installed capacity is just a fraction of the potential capacity of solar power development. As a nation that straddles the equator, it gets direct, high-intensity solar irradiance, putting it in an ideal position to harness solar energy.

What is Indonesia's solar energy plan?

This progress is part of Indonesia's solar energy plan, which targets 5 GW of installed capacity by 2030. The growth of solar power in Indonesia reflects not just a commitment to shift away from its fossil fuel-dominated energy system but also recognises the immense potential the solar energy holds in the Indonesian archipelago.

Will solar PV fuel Indonesia's energy transition?

The emergence of solar PV in fueling Indonesia's energy transition ISEO 2023 provides an update on the progress of solar PV as the primary energy source in Indonesia's energy transition, as well as its challenges and market opportunities.

Where is runergy ranked?

We are ranked 3rd for global PV cell sales by PVInfoLink from 2020 to 2022 with a current high-efficiency cell capacity of 25GW. Runergy, founded in 2013, is the leading PV cell and solar module manufacturers in the world.

The capacity of solar energy in Indonesia is steadily climbing. With total capacity reaching over 322.6 MW as of the first half of 2023, this is an increase of over 800% in the last 10 years. This progress is part of Indonesia's solar energy plan, which targets 5 GW of installed capacity by 2030.

Since its inception, Runergy has produced a total of 50GW of photovoltaic products, annually generating 500 million kWh of clean electricity. Runergy is committed to reducing the environmental impact of solar cell production through continuous, independent innovation. Collaborative efforts with Germany's Fraunhofer-ISE and

Runergy is one such innovator and has become one of the leading PV cell manufacturers in the world since its establishment in 2013. We are ranked 3rd for global PV cell sales by PVInfoLink from 2020 to 2022 with a current high-efficiency cell capacity of 25GW.

ISEO 2023 provides an update on the progress of solar PV as the primary energy source in Indonesia's energy transition, as well as its challenges and market opportunities. Previously, solar progress was included in the IESR's annual ...

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity ...

Runergy has ranked the top three in the world in cell shipments for consecutive three years from 2020 to 2023<sup>1</sup>. As of the end of 2022, Runergy's global production capacity of large-size high-efficiency cells exceeded 25GW. In 2023, the total production capacity of solar cells is expected to be over 61GW, and the

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity supply, ...

ISEO 2023 provides an update on the progress of solar PV as the primary energy source in Indonesia's energy transition, as well as its challenges and market opportunities. Previously, solar progress was included in the IESR's annual flagship report Indonesia Energy Transition Outlook (IETO), but this year we made it into a separate publication.

<sup>1</sup> With an average solar irradiance exceeding 4.8kWh per square meter per day and abundant sunshine throughout the year, Indonesia has the capability to generate between 7.7 ...

<sup>1</sup> With an average solar irradiance exceeding 4.8kWh per square meter per day and abundant sunshine throughout the year, Indonesia has the capability to generate between 7.7 to 20TW of solar power.
