

# Solar plate ke aaj ke rate St Kitts and Nevis

Solar has a powerful impact. Generate your own clean energy, reduce your monthly electricity bills, protect yourself from rate hikes and use those savings to empower your life.

This document presents St. Kitts and Nevis' Energy Report Card (ERC) for 2021. The ERC provides an overview of the energy sector performance in St. Kitts and Nevis. The . ERC also includes energy efficiency, technical assistance, workforce, training and capacity . building information, subject to the availability of data.

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

On successful completion of this fully integrated solar photovoltaic system and a lithium-ion battery energy storage system (BESS), the facility will supply Saint Kitts with 30% to 35% of consumers' annual electricity demand by utilizing sustainable and renewable solar energy with ZERO carbon emissions.

The solar panels collect sunlight that is converted into electricity. The solar project on St. Kitts will be oversized, allowing a portion of that electricity to meet current electric demand on the island, and the remainder to charge the large-scale battery storage system to meet island demand after the sun sets.

The solar PV will supply St. Kitts with 30 - 35% of the annual electricity demand utilising sustainable, solar energy with zero emissions. The solar and storage system will replace over 4,000,000 gallons of diesel per year.

On successful completion of this fully integrated solar photovoltaic system and a lithium-ion battery energy storage system (BESS), the facility will supply Saint Kitts with 30% ...

This is the Energy Report Card (ERC) for 2022 for St. Kitts and Nevis. The ERC provides an overview of the energy sector performance, highlighting the following areas: o Installed Conventional and Renewable Power Generation Capacity

Saint Kitts and Nevis receives very high levels of solar irradiation (GHI) of 5.6 kWh/m<sup>2</sup>/day and specific yield 4.6 kWh/kWp/day indicating very strong technical feasibility for solar in the country.<sup>3</sup> In 2021, only 4.76% of the country's power demand was met through RE sources.<sup>4</sup>

The solar PV will supply St. Kitts with 30 - 35% of the annual electricity demand utilising sustainable, solar energy with zero emissions. The solar and storage system will ...
