By 2026, nearly 29.3 gigawatts will have been installed in Spain, making Spain the second country in Europe with the most solar power. Such an increase is not surprising, given the number of sunshine hours in this country and the various incentives that have been implemented to facilitate the energy transition in homes and businesses.

To meet these targets, the new energy strategy outlines a plan to have 214 GW of total installed capacity in the electricity sector by 2030. This includes 160 GW from renewable generation and 22 ...

Generate your own electricity in Spain with solar power. A solar panel installation provides a fantastic return on investment and, with the savings you will make on your electricity bill, your solar panels will pay for themselves in just a few ...

Following the Spanish government's move a couple of years ago to crack down on households generating their own solar power, switching to the renewable energy has generally been seen as not being viable for the average individual. The infamous royal decree 900/2015, which came into effect in October 2015, effectively raised the costs of running your own solar setup.

The current surge in Spanish solar energy in Spain is not unprecedented. Between the late 2000s and early 2010s, Spain experienced a solar boom that saw the country reach 4.5 GW of solar PV installed capacity in 2012, from just 125MW in 2006. ... and developing the hardware necessary for energy generation will require far more public sector ...
