

So after painstakingly programming a computer to automatically make the solar panels track the sun, I find out that the computer is broken and that it won't be fixed for some time. Now the ...

I install solar panels with the power port facing east, horizontally set to 90 (previously it was 270) below the power line ports, I vertically install the batch writer-logic reader-daylight sensor in one line, connect the ports in line and run it to other side to the solar panel ports below them

Go to Stationeers r/Stationeers ... Hello! My solar panels are set up like wings from my base a little bit off the ground. I am not sure if i want to keep expanding or make some type of ground based field that is more or less a square or ...

If you take the standard "Solar Sensor to Reader to Math to Batch Writer with Memory" solar panel setup, and tweak it a bit you can get very efficient solar tracking on Vulcan. Here's how: - Change the 1.8 memory setting to 0.9; - Place the solar sensor on the side that faces the sun in the direction you first see it rising;

Logic Reader = Daylight sensor (solar angle) Logic Processor set as Logic Math. Input 1 to Logic Reader, Input 2 to Memory and set Logic Math to divide (divide input 1 by input 2) Batch writer set input to Logic Math, output to Solar Panel(s) type vertical. At least I think that's your setup.

So after painstakingly programming a computer to automatically make the solar panels track the sun, I find out that the computer is broken and that it won't be fixed for some time. ... Stationeers. All Discussions ... I'll second this as the best solar panel automation out there. #3. Adam De Beers. Mar 30, 2018 @ 6:24am ...

Solar Panel From Unofficial Stationeers Wiki. Translate this page. Other languages: English. Solar Panel; Recipe ; Created With: Fabricator: v; t; e; Description . Regenerable power supply, providing up to 500W per panel. Notes . After placement be sure to ...

Notes []. The Daylight Sensor MUST be facing West (sunrise), but it's rotation doesn't matter.; Solar panels should be rotated such as that 0% VERTICAL rotation faces west/sunrise, and 100% VERTICAL faces east/sunset. The Area Power Control is necessary for the circuit to stay powered during the night.; Importantly, the solar input power doesn't directly ...

Posting my simple Solar tracking Script for Mars, that could be used as a boiler plate. I used the tweak posted in this thread to optimize it. The Script is for the Solar panel with a single combined port for data and power. ...

but after this update my solar panels seem to get stuck facing south during the night and refuse to track the sun come morning. ive had a long fiddle with the logic and sensor orientation but i cant work out how to get my solar set up working again.

So a Vertical value above 90 means it's night time and a good time to Park the solar panels. Parking the solar panels right now should always be done by facing them towards the East, but due to the reason below, this could change in the next update. Here is an example to show how strange things are right now.

Solar control lets you remotely control the angle of any Solar Panel connected to it. Solar control needs to be installed in a Console and connected to the network input of the Solar Panels you wish to control. You'll need to use a Data Disk to tell the Solar Controller which Solar Panels you want to control. The Solar control Circuitboard ...

* Scans network for all tracking capable solar panels! * Fully compatible with mirrored solar panels! * Plug-n-play configure-less operation! * Rest-at-night so your panels are always ready to generate power in the morning! * Maintenance mode! * Color coded power and efficiency display outputs! * Readable state for expandable automation! Required:

I was attempting to use a console and a solar control board to create a "group" to control all solar panels at once (like you can do manually) but with a logic computer instead. I hit a roadblock when the only thing I can access from the console is Power and Open. Is there a way to access the vertical and horizontal from a solar console? I was hoping to avoid making a ...

Kit (Solar Panel Basic Heavy) don't have logic inputs. Kit (Solar Panel Heavy) have logic inputs. Positioning . Pay close attention to the positioning of your solar panel since their automation will depend heavily on it. Most user-made scripts and guides orient the panels with the data port facing sunset and the power port facing sunrise. Notes

Stationeers. All Discussions Screenshots Artwork Broadcasts Videos Workshop News Guides Reviews ... Exact 2 Axis Solar Panel Controller for Mars (Ecliptic Sol Path) I am sure there are good solutions out there but I found nothing really usefull. Most are outdated or inaccurate or have other disadvantages so I sat down and solved that problem by ...
