

Terrablock storage Switzerland

How does terrablock work?

The TerraBlock is the only shared storage solution that allows you to dynamically change volumes based on your needs. You can change a volume from Single User write to Multi User write and back with a click of a button. Any volume can be assigned Read Only permissions to avoid accidental writes or deletions.

Can a client connect to a terrablock without a Fiber Channel switch?

Clients may direct connect to the TerraBlock without the use of a Fibre channel switch. Both the Ethernet and Fibre clients can access the same Multi Write volume at the same time. The TerraBlock is the only shared storage solution that allows you to dynamically change volumes based on your needs.

Does terrablock have Ethernet?

TerraBlock's Ethernet option is the optimal solution for low bandwidth or high client count environments. Facilities that require high bandwidth can make use of the standard 8Gb Fibre connectivity available on the TerraBlock. Clients may direct connect to the TerraBlock without the use of a Fibre channel switch.

Or are you searching for the latest shared storage solution for your content creation and post-production workflows?
