

What makes virya energy unique?

Virya Energy is convinced that the technology solutions offered by Fluves perfectly fit within the strategic ambitions of Virya Energy and strengthen its unique position in the rapidly evolving renewable energy industry.

Who is virya energy?

Established at the end of 2019 by the Colruyt Group and its majority shareholder Korys, Virya Energy today owns 100% stakes in Parkwind, Eurowatt, Eoly Energy and Sanchore. Virya Energy is set to further develop renewable energy generation capacities and deliver services across the full value chain of sustainable energy solutions including storage.

What is vision hydrogen partnering with virya energy?

Vision Hydrogen subsidiary VoltH2, in partnership with Virya Energy, reaches a critical developmental milestone towards development of a 25 MW green hydrogen production facility with tube-trailer loading and integrated distribution facilities. This scalable platform allows the partnership to scale up production capacity at this Site to 75 MW.

Why did virya energy change its ownership structure?

Virya Energy CEO Paul Tummers stated: "This shift in ownership structure is a positive and natural development for Virya Energy. Korys' commitment to sustainability aligns perfectly with our vision to develop more than 3GW of production capacity across the full energy value chain over the next ten years.

Who are virya energy & eoly energy En eurowatt?

Virya Energy, which groups the companies Parkwind, Eoly Energy and Eurowatt, is much experienced in the production of renewable power (both onshore and offshore) and is currently also developing multiple H2 related projects.

Will korys reinvest in virya energy?

Korys aims to bolster Virya Energy's capacity to achieve its ambitious international growth objectives. The acquisition of a controlling interest in Virya Energy, coupled with the reinvestment of proceeds from 2023's sale of Parkwind to JERA, will boost Korys' position in the renewable energy market.

Grâce à l'expertise de Virya Energy dans le développement de l'hydrogène depuis 2007, nous produisons de l'hydrogène vert à l'échelle industrielle en utilisant l'électrolyse de l'eau alimentée par de l'électricité renouvelable. Cette technologie propre, ne rejetant que de l'eau et de l'oxygène, sert diverses ...
